

Red Eye Correction

- 1) Open the image that you want to correct.
- 2) Resize the image for the web.
- 3) Save the photo as red-eye-original
- 4) Move your mouse to the tools and select RED EYE TOOL.
You may have to scroll down the SPOT HEALING BRUSH sub-menu to find it!!!!

- 5) Click on each eyeball to fix the red. (You might have to zoom in on the eye to get an accurate click.) That's it!!!!
- 6) Save your corrected image as Red-Eye-Corrected.

Why is there red eye in some photos?

The red eye is caused by **the** light from **the** flash off **the** tapetum lucidum behind **the** retina reflecting directly back at **the** camera. ... **The** reason some people's **eyes** aren't showing **red** in **a photo** is just that they weren't looking directly at **the** lens of **the** camera.
